Acceptance testing

Sacrificial Testing

Soil Nail Design

With over 30 years experience in the design and construction of soil nail slopes RGL can bring a wealth of experience to your next soil nailing project. RGL offers a full design service from early advice on the most appropriate site investigation and installation techniques through to project completion. RGL can provide a highly efficient design incorporating the temporary works and sequencing as well as advice on soil nail testing and interpretation. With a wealth of knowledge on soil nail facing systems we will also supply you with a design for the most appropriate facing solution for your slope.

Remedy Geotechnics delivers a full soil nail design service backed up by an abundance of experience from professionally qualified geotechnical engineers.

We employ the latest design techniques fully integrated with the latest design codes and best practice guidance. Coupled with our practical construction experiences RGL will provide you with the service you need. So whether you require an efficient tender design or a full contract design you can be assured that RGL will supply you with a comprehensive, effective and economical solution for your soil nail project.
